

⑥

1) Dot product ↓

$$\begin{bmatrix} a & b & c & \dots & \dots \end{bmatrix}_{1 \times n} \begin{bmatrix} p \\ q \\ r \\ \vdots \\ \vdots \end{bmatrix}_n = (a \times p) + (b \times q) + (c \times r) + \dots$$

$$y = ax + b$$

$$y = 10x + 2$$

$$y' = 10 \times 100 + 2 = 1002$$

2) Length

$$\sqrt{x^T x} = \sqrt{x \cdot x} = x$$

3) Distance between two vech x, y

$$|x - y| = \sqrt{(x - y)^T (x - y)}$$

$$\sqrt{\begin{bmatrix} x_1 & x_2 & x_3 & \dots \end{bmatrix} \begin{bmatrix} x_1 \\ x_2 \\ x_3 \\ \vdots \end{bmatrix}} = \sqrt{x_1^2 + x_2^2 + x_3^2 + \dots}$$

4) inner product

$$\langle x, y \rangle$$

5) Length

$$||x|| = \sqrt{\langle x, x \rangle}$$

λ eigenvalue
 b eigenvector

"iterative" algorithm

Find the first principal component

(component)
(eigenvector)

50%

Find the second principal component

(eigenvector)

30%

b_1, b_2
basis

$$\langle b_1, b_2 \rangle = 0$$

$$\|b_1\| = 1$$

$$\|b_2\| = 1$$

$$\min \|x - \pi_U(x)\|$$

$$\langle x - \pi_U(x), b \rangle = 0$$

$$\pi_U(x) = \boxed{\lambda} b$$

$$\langle b, x - \pi_U(x) \rangle = 0$$

$$\langle b, x - \lambda b \rangle = 0$$

$$\langle \overset{b}{b}, x \rangle - \lambda \langle b, b \rangle = 0$$

$$\lambda = \frac{\langle x, b \rangle}{\langle b, b \rangle}$$

$$\boxed{\lambda = \frac{b^T x}{\|b\|^2}}$$

~~orthogonal~~
b is orthogonal

CONCEPT

linear

$$\phi_1 x_1 + \phi_2 x_2 + \dots$$
